

it's everybody's business to **RAISE** the bar.

Empower your people with a Microsoft SharePoint business solution **customised for JSA and DEN providers.**

Increase productivity, share information, build relationships, improve operations, and innovate. Our customised solutions make it easier for your consultants and managers to work together, connect to people and information, improve operational visibility, and stay on the front line of decision making.

We offer an Employment Services Business Productivity Solution — based on the Microsoft® Office SharePoint Server — that can empower your consultants and managers to do more. Give them the innovative business capabilities they want — in a platform that fits the way they work — while maintaining the flexibility and control your organisation requires:

- **Document and content management.** Delivered through an enterprise-grade Intranet, Extranet or Portal solution that allows consultants to manage the end-to-end life cycle of a wide range of content and processes including Documents, Records, Assessments, Purchase Orders, Web Content, Blogs, Wikis, Discussion Forums and Shared Calendars to name a few.
- **Enterprise search.** Empower consultants to find information and data anywhere in your organisation giving 'Google' like searching capabilities.
- **Collaboration.** Extend your organization's collaborative capabilities with a more secure and scalable infrastructure that supports team workspaces, document workspaces and caseload collaboration tools. Know what's going on through shared calendars and keep in touch through company events and blogs.
- **Business process automation and workflow.** Use dynamic online forms for Assessments and Purchase Orders. Powerful workflow automates the approval process and other complex error prone manual business processes and at the same time actively reduces paper wastage.
- **Business intelligence.** Help deliver the right information to the right people at the right time within your organisation through powerful Reporting and Dashboards.
- **Unified communications.** Harness the power of inbuilt tools to streamline communications regardless of medium, device, or location. Utilise 'presence' information to connect to your colleagues at any time during the working day. Feel connected and in control.
